

week 1

- **First, I watched the youtube video series upto space complexity, and made clear notes of that.**
- **I have completed sorting algorithms including their code, algorithm, time complexity and space complexity.**
- **I read stl library functions and made important notes from that.**
- **I read hashing from the book but I am not much familiar with that so I am not confident enough to say that ya I know hashing very well.**
- **Other than this I have done around 15 questions from hackerrank problem solving implementation questions, I don't remember the exact count but I am still practicing on that so I will definitely reach 20+ today. And questions are all from implementation section only. And also I have tried some problems on leetcode as well I am not sure how much I did completely on that platform.**
